

Occupational Health Speaker Series

EHS 668/IOE 837

Terrance Alexander, PE, CIH

Speaking on

Managing EHS Services in a Highly Decentralized Research University

Terrance G. Alexander is the Executive Director of Occupational Safety & Environmental Health for the University of Michigan. The University of Michigan is a complex network of inter-related operations from education to research to medical care, and the entire infrastructure necessary to maintain a world class operation. With over 42,000 students, 40,000 faculty and staff supporting operations, and thousands of visitors daily, the challenges of providing environmental health and safety programs to a decentralized organization are daunting. This talk will touch on the complex issues being faced, our ability to gain support for making sure we have a safe and vibrant campus, and provide insight into the multiple programs offered by the Occupational Safety & Environmental Health department.

All interested persons are welcome to attend.

Friday, Feb 22; 1-2pm ; 2610 SPH I
